

Instructions for „Sunrise“ erection

Dear Customer,

Congratulations on your purchase of your new Herzog awning, we wish you many happy relaxing days ahead. You have purchased a top quality product, manufactured to the highest standard using optimum materials, which will give you years of trouble free use.

Specification:

- Frame: 2x Aluminium poles Ø 14mm (1 shorter pole, 1 longer pole); 2 fitting bars, steel.
- Roof & Walls: Roof combined with side walls, 1 detachable front wall with mosquito net, windows with mosquito net and flap.
- Accessories: Holdall, pegs, guy ropes

Caution: Please note, that the aluminium poles, when bent into place, are under stress and caution should be taken to prevent damage or injury.

Erection:

Draw the canvas in to the caravan awning rail, ensuring that the awning roof does not extend down the curve of the caravan roof (a).

Please connect the pole parts.

Push the longer Aluminium pole (b2) in to behind transversal leading pole-seam. Do not fix this pole first at all.

Push the shorter Aluminium pole (b1) in to the transversal leading anterior pole-seam. Do not fix this pole first at all.

Tipp: Please draw the both transversal leading floor-ribbons wide apart as possible, than it is easier to mount the poles.

Afterwards, please fix one end of each pole-bow on adjustable floor-ribbons (stick in little bag)

The frame will bend to creating a tunnel effect (a little force is necessary).

Fix now the other ends of each poles in adjustable floor-ribbons (stick in little bag).

Please fix the side walls which touch the caravan by the enclosed pegs.

Draw now the awning away from the caravan, until creating the figure.

Please fix the awning by the enclosed pegs on the floor (d).

Please fix the fitting bars.

Indication: The Sunrise was constructed as a light weight awning. It is not constructed for permanent putting and snow/winter.
